Test scenarios

Test Scenario: Assigning issue to a user

Description: Assigning issue to a user in JIRA

Preconditions: User should have permissions to assign issue.

Test steps:

1. Navigate to https://jira.trungk18.com/project/board
2. Choose issue from the board and click on it
3. Locate "add assignee" field
4. Select a user from a dropdown list
5. Click on "Save" button <- this step would be in a real app, but in demo JIRA app we don't have it

Expected result: Issue should be successfully assigned to the selected user. Verify that the assignee's name appears in the "Assignee" field.

Test Scenario: Filtering "Only my issues" in JIRA

Description: Filtering only issues that are assigned to the logged-in user

Preconditions: User has appropriate permissions to view issues assigned to him

Test steps:

1. Navigate to https://jira.trungk18.com/project/board
2. Locate and apply "Only My Issues" on the dashboard
3. Check that filtered issues correspond only to those assigned to the logged-in user
4. Ensure that each issue shown has the logged-in user's name listed under the "Assignee" field

Expected result: The "Only My Issues" filter correctly displays only those issues assigned to the currently logged-in user. Each issue listed shows the logged-in user's name under the "Assignee" field.

Negative Test Scenario: Creating an issue in JIRA

Description: Testing creating an issue under conditions that are expected to fail or encounter errors

Preconditions: User has appropriate permissions to create issues in the selected project

Test steps:

1. Navigate to Create Issue Form
   - Go to https://jira.trungk18.com/project/board
   - Navigate to Create Issue icon from navigation panel and click
2. Enter invalid information into Issue Details or leave mandatory fields empty
   - Leave summary field empty
   - Enter a description that exceeds the character limit
3. Submit the issue
   - Click on the "Create Issue" button to attempt to create the issue with invalid data

Expected result: The issue should not be created due to invalid information. In case for leaving summary field empty, "Create Issue" button should be disabled. In case that fields are invalid, error messages should appear. User should not be able to proceed with creating the issue.
